

Detection Cleaning Protocols

There are 3 different cleaning protocols we recommend in order from least to most intensive:

Cleaning Protocol #1 (Least intensive)

1. Spray or wipe and deionized water
2. Dry with disposable lint-free wipe

Cleaning Protocol #2 (Intermediate)

1. Spray or wipe with 70% isopropanol
2. Spray or wipe with deionized water
3. Dry with disposable lint free wipe

Cleaning Protocol #3 (Most Intensive)

1. Spray or wipe with a 1% solution of Liquinox
2. Spray or wipe with a 70% isopropanol x 2
3. Spray or wipe with deionized water x 3
4. Dry with disposable lint free wipe

CLEANING SOLUTIONS

These are the cleaning solutions we use to clean our TADDs after a day of training:

Bottle 1 – Deionized Water

Bottle 2 – 70% Isopropanol (IPA) alcohol

Bottle 3 – 1% Liquinox Detergent

1. Dilute the Liquinox Concentrate 1:100 with water to create the 1% Liquinox solution.
2. To do this, add 4.5 ml of the Liquinox concentrate to the 16 oz spray bottle
3. Then, add 444 ml deionized water (approx. 15 oz) to the spray bottle.
4. Cap and swirl to mix
